

## Global Power Synergy Public Company Limited

Code of Practice	Green Procurement Guideline	Effective Date: January 1, 2020
Regulations and Related Commands	Global Power Synergy Public Company Limited Announcement  No. 006/ 61  Title: Sustainable Procurement and Supplier Management Policy	

### Definition

“**Green Procurement**” refers to a purchase of goods or services that impose less environmental burden than the ones performing the same functions, by considering the effect of the goods/service throughout its life cycle, spanning from design, procurement of raw materials, production method, packaging, transportation, usage, to disposal after use in order to maximize resource efficiency.

### Objective

With the commitment to promote *Green Procurement* and put forth effective and sustainable supply chain management, GPSC encourages its internal departments to recognize and understand the significance of environmentally friendly procurement. Thus, its procurement team from Human Resources Management and Organization Development joined hands with the Climate Change Management under supervision of the executive team to formulate the Green Procurement Guideline with the following objectives;

1. To act as a guideline for effective and accordant procurement that allows for subsequent assessment
2. To motivate suppliers to be more environmentally conscious. Such demands for green goods/services result in green supplies, which in turn create sustainable consumption.

### Rules/Practices

To ensure the procurement process complies with the green procurement guideline, the steps to purchasing green goods/service are as follows

### 1. Purchase goods or acquire services in the “Green Basket”

Goods and services in the Green Basket are items that have been certified as environmentally-friendly by the Pollution Control Department. This includes products with Green Labels. To see what is certified, please visit <http://gp.pcd.go.th>

### 2. Purchase goods or acquire services with environmental labels (Green Label)

In case the desired item is not in the green basket, the purchasing officer should opt for items with following environmental labels; Carbon Footprint label, Carbon Footprint Reduction label, Cool Mode label, Label No.5, High Efficiency Energy Saving label, Green Production emblem, G Upcycle emblem, Green Leaf, Green Hotel, Green Office, Green National Park, Eco Self Declare label, SCG Eco Value label, Green For Life emblem and others.

The list can be found on <https://www.thaiecoproducts.com>

### 3. Purchase goods or services with “Green Industry” certification

If the desired goods or service is not in the green basket nor have the green label, the purchasing officer should choose the product or service with a Green Industry certification. More information and list can be found on <http://greenindustry.diw.go.th>

In a situation where the desired goods or service possesses none of the above qualifications, the purchasing officer should consider the goods/service that imposes minimum environmental impact with regards to the interest of the company deriving from such purchase.
